HOW TO MEASURE FOR CURTAINS

WIDTH

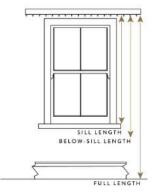

Measure the track or pole, not the window itself.

For tracks measure the width from end to end.

For poles measure the width between the decorative finials.

DROP

Maximum depth of track is 3.5cm from top of track to bottom of glider.

For tracks measure from the top of track to allow it to be hidden by the curtains.

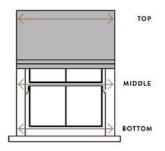

For poles measure from the underside of the curtain ring to allow the pole to be seen above the curtains.

MEASURE FROM THE CORRECT POINT TO SILL LENGTH ICM ABOVE SILL BELOW SILL LENGTH DESIRED LENGTH LENGTH ICM ABOVE THE FLOOR

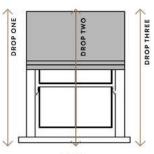

HOW TO MEASURE FOR BLINDS

INSIDE A WINDOW RECESSS

WIDTH

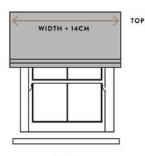

For all other blinds, measure the width at the top, middle and bottom of the recess. If there is a difference, record the smallest measurement to ensure that the blind does not snag on the recess when lowered.

DROP

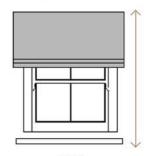

Measure the length at both sides and middle of the recess. if there is a difference, order using the smallest measurement to ensure the blind hangs freely.

OUTSIDE A WINDOW RECESSS

WIDTH

Measure the width at the top of the window recess, and add a minimum of 7cms each side (14cms in total) for the blind to overlap the window.

DROP

Measure from the required position above the window down to the required length.
